

## Net Zero Investment & Planning

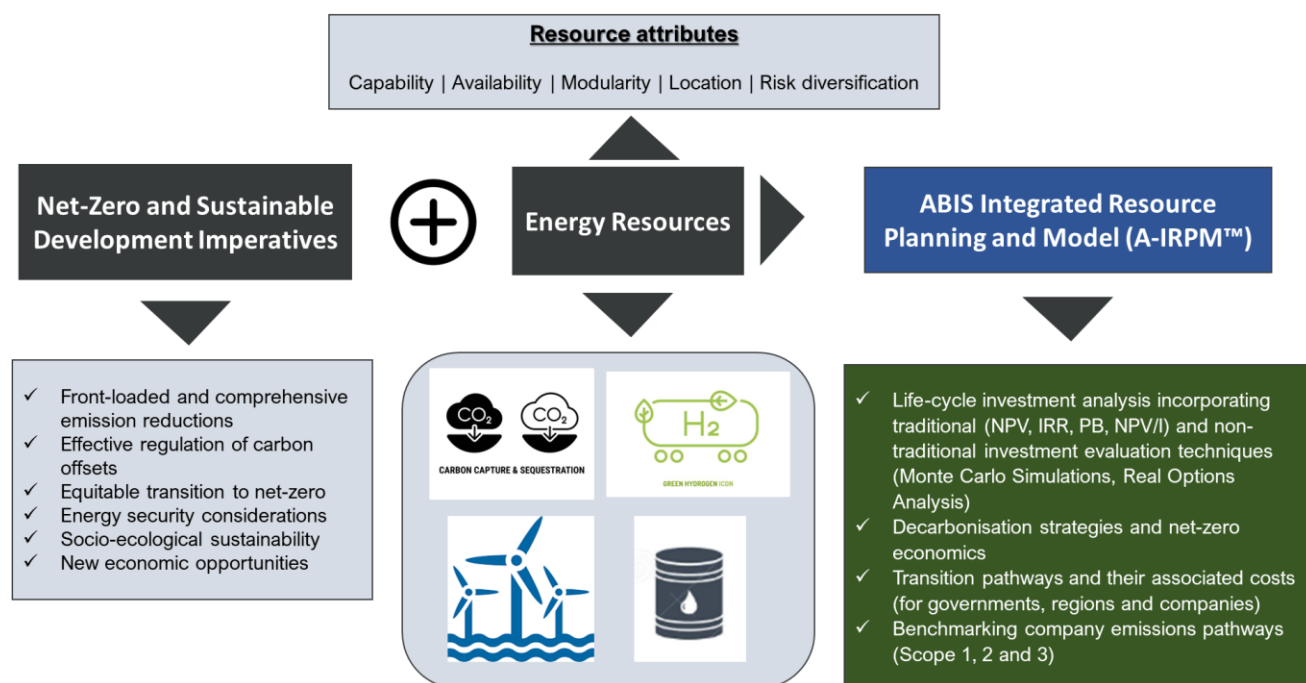

### ABIS Integrated Resource Planning and Model (A-IRPM™)

Despite the strong push to net-zero 2050 by global governments, the various tools available to assess and benchmark their practical implications for energy investment decision making remain ad-hoc.

ABIS vision is to fill this market gap through a comprehensive integrated resource planning tool and model.

#### What can ABIS (A-IRPM™) do

- ✓ Life-cycle investment analysis incorporating traditional (NPV, IRR, PB, NPV/I) and non-traditional investment evaluation techniques (Monte Carlo Simulations, Real Options Analysis)
- ✓ Decarbonisation strategies and net-zero economics
- ✓ Transition pathways and their associated costs (for governments, regions and companies)
- ✓ Benchmarking company emissions pathways (Scope 1, 2 and 3)

We have identified an Energy Hub that will play a significant role in the UK's Energy future through a combination of blue and green hydrogen, Offshore Wind Power, Nuclear and Carbon storage.
